

Aim: EMBEDDED C PROGRAM TO MULTIPLY TWO 16-BIT BINARY NUMBERS

Objectives:

- Overcome 8-bit limits: Learn how the 8-bit 8051 microcontroller handles larger 16-bit math operations.
- Prevent data overflow: Use a 32-bit variable (unsigned long) to safely hold the large final result.
- Verify memory updates: Use the Keil simulator watch window to check the correct multiplication result

Output:
